PROFESSIONAL SUMMARY

Data Engineer with 4+ years of experience building scalable data pipelines on GCP and AWS. Expertise in BigQuery, Airflow (Composer), Apache Spark, and DBT for batch and real-time analytics. Experienced in cloud migration, regulatory data systems, and high-volume financial and pharma datasets.

TECHNICAL SKILLS

Languages: Python, SQL, Scala, Java

Cloud Platforms: GCP (BigQuery, GCS, Composer, Dataproc, Pub/Sub, Cloud Functions), AWS (Redshift, S3, Glue, Lambda)

Big Data & Tools: Apache Spark, Airflow, DBT, Kafka

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB

DevOps: Git, Jenkins, Docker, CI/CD

EXPERIENCE

Data Engineer

Apr 2025 – Present

IG Group (Financial Services)

India

- Architected and implemented end-to-end **SFMC (Salesforce Marketing Cloud) data integration** processing 15+ objects daily into enterprise analytics systems.
- Designed scalable **Medallion Architecture (Bronze–Silver–Gold)** on BigQuery using DBT, enabling governed, analytics-ready datasets for compliance and data science use cases.
- Developed enterprise-grade **Airflow orchestration framework** with scheduling, retries, data validation, and automated backfill DAGs for historical recovery.
- Engineered complex transformation pipelines handling UTF-16LE encoded files, custom delimiters, and schema inconsistencies across multiple Salesforce data sources.
- Built dual-delivery data system populating both **BigQuery warehouse** and **Cloud Storage data lake**, supporting 10+ client-facing dashboards and 5+ ML models.
- Led architectural design of multi-source conversation data platform integrating **Genesys, Intercom, and EdgeTier** into unified Firestore schema.
- Designed source-agnostic normalized data model with adapter pattern implementation, enabling consistent REST API access and real-time conversation analytics.
- Optimized BigQuery performance using partitioning, clustering, materialized views, and incremental DBT models, reducing cost and query latency.
- Contributed to architecture review discussions and authored **Architecture Decision Documents (ADDs)**, evaluating trade-offs across Dataflow vs Dataproc and Pub/Sub vs Kafka.

Specialist Programmer – Data Engineering

Jul 2022 – Apr 2025

Infosys (Pharma Client)

India

- Migrated large-scale pharmaceutical analytics platform from **AWS Redshift to GCP BigQuery**, improving scalability and performance.
- Developed **Spark pipelines on Dataproc**, reducing processing time by 30%.
- Implemented modular data transformations using **DBT** with automated data quality checks.
- Ensured zero data loss during migration and validated schema compatibility across cloud platforms.
- Collaborated with analytics and reporting teams to deliver governed, production-ready datasets.

SYSTEM ARCHITECTURE & DESIGN HIGHLIGHTS

- Designed BigQuery-based Lakehouse using Medallion Architecture (Bronze–Silver–Gold) with DBT-driven transformations.
- Implemented cost-optimized serverless ingestion pipelines using Cloud Run and Scheduler.
- Standardized data contracts, naming conventions, and lineage tracking for cross-team consumption.
- Authored Architecture Decision Documents (ADDs) evaluating scalability, cost, and operational trade-offs.

EDUCATION

Bachelor of Technology in Information Technology

Maharaja Agrasen Institute of Technology

Jul 2018 – Jul 2022

India
